

# SimpleVoiceActing User Guide

## File Organization:

- Place your voice files in audio/se/
- You can organize files in subdirectories.
- Do NOT include audio/se/ or the file extension. The plugin will try .ogg first, then .m4a.

## Examples:

- audio/se/hero\_intro.ogg -> \voice[hero\_intro]
- audio/se/hero/attack.ogg -> \voice[hero/attack]

## Inline Text Escape Code:

\voice[FileName]

\voice[FileName,Volume,Pitch]

- FileName -> name of the file, including subdirectory if needed.
- Volume -> 0?100 (optional, defaults to SE volume option)
- Pitch -> 100 = normal pitch (optional)

## Behavior:

- Only one voice plays at a time.
- Playing a new voice automatically stops or fades the previous voice.
- Voices stop automatically when the message ends or is skipped.
- Fade duration can be configured in plugin parameters.
